
a
Reversible bimolecular reaction in a sinusoidal potential
subvolume
10 nm
A
B
C
reversible binding
external potential along x
one period
0
simulation box
320 nm
b
MPD-RDDME reproduces equilibrium distributions predicted by iPRD
species A
species C
occupancy / mean
x/λ
iPRD
MPD-RDDME
point particles
c
Particles are driven toward locations of energy minima
occupancy of A / mean
landscape U minus its mean (k_B T)
τ = 0
τ = 0.053
τ = 15
two periods of the field along x
two periods of the field along x
